Contents

1. Introduction 7
2. Molecularly adsorbed water 8
   - 2.1. Electronic structure of adsorbed water 9
     - 2.1.1. Valence band 9
     - 2.1.2. Core levels 15
   - 2.2. Vibrational properties of adsorbed water 18
   - 2.3. Local and long-range structure of adsorbed water 22
     - 2.3.1. Orientation 22
     - 2.3.2. Bond lengths and bond angles 25
     - 2.3.3. Long-range order 26
   - 2.4. Dynamical properties of adsorbed water 29
     - 2.4.1. Adsorption 29
     - 2.4.2. Diffusion 33
     - 2.4.3. Desorption 36
       - 2.4.3.1. Molecular desorption from ice 37
       - 2.4.3.2. Molecular desorption from clustered water 39
       - 2.4.3.3. Molecular desorption from weakly clustered or isolated water 45
       - 2.4.3.4. Recombinative desorption of water 50
   - 2.5. Interplay between water–water and water–surface interactions 60
     - 2.5.1. Monomeric water on surfaces 61
     - 2.5.2. Clustering of water on surfaces 63
       - 2.5.2.1. Dimers and small water clusters on metals 66
       - 2.5.2.2. Cluster growth of water on metals 68
       - 2.5.2.3. Bilayer water on metals 72
       - 2.5.2.4. Clustering of water on non-metals 78
     - 2.5.3. Molecular water at defects and reconstructed/relaxed surfaces 82
3. Dissociation of water on surfaces 85
   - 3.1. Thermal dissociation of water on surfaces 87
     - 3.1.1. Water dissociation on metal surfaces 92
     - 3.1.2. Water dissociation on semiconductor surfaces 95
       - 3.1.2.1. Water dissociation on Si surfaces 96
       - 3.1.2.2. Water dissociation on miscellaneous semiconductor surfaces 112
     - 3.1.3. Water dissociation on oxide surfaces 113
       - 3.1.3.1. Water dissociation on ideal oxide surfaces 113
       - 3.1.3.2. Water dissociation on defective oxide surfaces 119
       - 3.1.3.3. Controversial cases of water dissociation on oxide surfaces 126
       - 3.1.3.4. Irreversible water dissociation on oxide surfaces 128
     - 3.1.4. Water dissociation on miscellaneous surfaces 130
   - 3.2. Non-thermal activation of water on surfaces 135
     - 3.2.1. Activation of adsorbed water with electrons 135
     - 3.2.2. Activation of adsorbed water with photons 138
       - 3.2.2.1. Activation of adsorbed water through photoionization 139
       - 3.2.2.2. Activation of adsorbed water through photoexcitation 141
     - 3.2.3. Activation of adsorbed water with ions, radicals and excited neutrals 146
     - 3.2.4. Activation of adsorbed water with electric fields 150

4. Coadsorption of water 150
4.1. Water coadsorbed with alkalis 151
4.1.1. Water coadsorbed with alkalis on metal surfaces 151
4.1.1.1. Probability of alkali-induced water dissociation 152
4.1.1.2. Kinetics for water desorption or reaction in the presence of alkalis 158
4.1.1.3. Thermal stability of alkali hydroxyl species 159
4.1.1.4. Alkali-induced water reorientation 162
4.1.1.5. Hydration of alkalis 164
4.1.2. Water coadsorbed with alkalis on non-metal surfaces 167
4.2. Water coadsorbed with oxygen 169
4.2.1. Coadsorption on metal surfaces without oxygen-induced water dissociation 171
4.2.2. Oxygen-induced water dissociation on metal surfaces 175
4.2.2.1. Kinetics and mechanisms of oxygen-induced water dissociation 176
4.2.2.2. Stability of OH from oxygen-induced water dissociation 182
4.2.2.3. Structure in the reaction of water with oxygen 188
4.2.2.4. Water + oxygen reactivity versus metal substrate 198
4.2.3. Coadsorption of water with molecular oxygen on metal surfaces 200
4.2.4. Coadsorption of water with oxygen on non-metal surfaces 201
4.3. Water coadsorbed with carbon monoxide 205
4.3.1. Site blocking in the coadsorption of water and CO 206
4.3.2. CO site shifting induced by water coadsorption 207
4.3.3. Attractive and repulsive interactions between water and CO 210
4.3.4. Chemistry in the coadsorption of water and CO 214
4.4. Water coadsorbed with hydrogen 215
4.5. Water coadsorbed with halogens 219
4.5.1. Water coadsorbed with halides 219
4.5.2. Water coadsorbed with acid halides 224
4.6. Water coadsorbed with miscellaneous adsorbates 227
5. Liquid or high-pressure water in contact with surfaces 234
5.1. High-pressure water at surfaces 234
5.1.1. High-pressure water-induced surface oxidation 234
5.1.2. High-pressure water-induced surface hydroxylation 238
5.1.3. Surface dissolution and precipitation in high-pressure water 243
5.1.4. Wetting versus clustering of water on surfaces at high pressures 248
5.2. Liquid water at surfaces 251
5.2.1. Wet oxidation of surfaces 252
5.2.2. Surface etching, dissolution and precipitation in liquid water 255
5.3. Water at the electrochemical interface 261
5.3.1. Potential-dependent orientation of water at electrochemical interfaces 261
5.3.2. Structure of water in the electrochemical double-layer 265
5.3.3. The role of water in charge transfer at electrochemical interfaces 273
6. Conclusions and future directions 275
